## Impact of Unmet Needs

QoL in adults

QoL in children and adolescents

Treatment Adherence

### Treatment Adherence

- Two primary reasons patients give for medication nonadherence are **residual symptoms and treatment-related adverse events** <sup>3,4</sup>

~ 60-70% of individuals with ADHD experienced a change in pharmacological treatment within 12 months \* <sup>5</sup>

Remained on ADHD treatment after 1 year <sup>6</sup>

The most common reasons for treatment discontinuation were

Suboptimal  
symptom  
management

ADHD/treatment-related  
complications, including  
anxiety/panic attacks and  
hypertension

Patient  
attitude/  
dislike of  
medication
