Treatment guidelines and current standards of care (US)

FDA-Approved
pharmacotherapies for ADHD

Integrative treatment approach

Integrative treatment approach

- There is a need to address the complete clinical presentation of ADHD 6
- Emerging evidence showing the interplay between monoamine neurotransmitters in ADHD pathophysiology highlights the need for an integrative approach to treatment 7

Dopamine

Norepinephrine

Serotonin

ADHD Core Symptoms⁸:
Impulsivity/hyperactivity
Inattention

ADHD Associated Features⁸:
Emotional dysregulation Executive dysfunction

Major Comorbidities⁸ :
Anxiety*

- Current treatments do not target all aspects of ADHD neurobiology and may not fully address associated features and comorbidities 6.

*Additional major comorbidities include depression, sleep disorders, and SUDs. ADHD, attention-deficit/hyperactivity disorder; SUD, substance use disorder
